Dear Rosydale City Marathon Racers, We are really grateful to all of you who have signed up for the 10th Rosydale City Marathon that was scheduled for this coming Saturday at 10 a.m. Unfortunately, as you may already know, the weather forecast says that there is going to be a downpour throughout the race day. We truly hoped that the race would go smoothly. However, it is likely that the heavy rain will make the roads too slippery and dangerous for the racers to run safely. As a result, we have decided to cancel the race. We hope you understand and we promise to hold another race in the near future. Sincerely, Martha Kingsley Race Manager

Libraries are becoming increasingly interested in the services they are providing for their users. This is an important focus — especially as more and more information becomes available electronically. However, the traditional strengths of libraries have always been their collections. This is true still today — especially in research libraries. Also, collection makeup is the hardest thing to change quickly. For example, if a library has a long tradition of heavily collecting materials published in Mexico, then even if that library stops purchasing all Mexican imprints, its Mexican collection will still be large and impressive for several years to come unless they start withdrawing books. Likewise, if a library has not collected much in a subject, and then decides to start collecting heavily in that area it will take several years for the collection to be large enough and rich enough to be considered an important research tool.

- ② changing roles of local libraries and their effects on society
- ③ growing needs for analyzing a large volume of library data
- ④ online services as a key to the success of research libraries
- ⑤ rare book collectors' contributions to a library's reputation

People don't usually think of touch as a temporal phenomenon, but it is every bit as time-based as it is spatial. You can carry out an experiment to see for yourself. Ask a friend to cup his hand, palm face up, and close his eyes. Place a small ordinary object in his palm — a ring, an eraser, anything will do — and ask him to identify it without moving any part of his hand. He won't have a clue other than weight and maybe overall size. Then tell him to keep his eyes closed and move his fingers over the object. He'll most likely identify it at once. By allowing the fingers to move, you've added time to the sensory perception of touch. There's a direct analogy between the fovea at the center of your retina and your fingertips, both of which have high acuity. Your ability to make complex use of touch, such as buttoning your shirt or unlocking your front door in the dark, depends on continuous time-varying patterns of touch sensation.

Viewing the stress response as a resource can transform the physiology of fear into the biology of courage. It can turn a threat into a challenge and can help you ①do your best under pressure. You can apply this strategy in your own life anytime you notice signs of stress. When you feel your heart beating or your breath quickening, ③realizing that it is your body's way of trying to give you more energy. A striving to demonstrate individual personality through designs should not be surprising. Most designers are educated to work as individuals, and design literature contains countless references to 'the designer'. Personal flair is without doubt an absolute necessity in some product categories, particularly relatively small objects, with a low degree of technological complexity, such as furniture, lighting, small appliances, and housewares. In larger-scale projects, however, even where a strong personality exercises powerful influence, the fact that substantial numbers of designers are employed in implementing a concept can easily be overlooked. The emphasis on individuality is therefore problematic rather than actually designing, many successful designer 'personalities' function more as creative managers. A distinction needs to be made between designers working truly alone and those working in a group. In the latter case, management organization and processes can be equally as relevant as designers' creativity.

Depending on the ____ (A) ____ of a project, the capacity of designers to ____ (B) ____ team-based working environments can be just as important as their personal qualities.
