

2027학년도 수능 대비 모의평가

1. 다음 글의 목적으로 가장 적절한 것은?

To whom it may concern, My name is Michael Brown. I have been a bird-watcher since childhood. I have always enjoyed watching birds in my yard and identifying them by sight and sound. Yesterday, I happened to read an article about your club. I was surprised and excited to find out about a community of passionate bird-watchers who travel annually to go birding. I would love to join your club, but your website appears to be under construction. I could not find any information except for this contact email address. I would like to know how to sign up for the club. I look forward to your reply. Sincerely, Michael Brown

- ① 조류 관찰 클럽에 가입하는 방법을 문의하려고
- ② 조류 관찰 시 주의해야 할 사항을 전달하려고
- ③ 조류 관찰 협회의 새로운 규정을 확인하려고
- ④ 조류 관찰과 관련된 웹 사이트를 소개하려고
- ⑤ 조류 관찰 시 필요한 장비를 알아보려고

2. 다음 글의 주제로 가장 적절한 것은?

Difficulties arise when we do not think of people and machines as collaborative systems, but assign whatever tasks can be automated to the machines and leave the rest to humans. This can end up requiring people to behave in a machine-like fashion, in ways that differ from human capabilities. We expect people to monitor machines, which means keeping alert for long periods, something we are bad at. We require people to do repeated operations with the extreme precision and accuracy required by machines, again something we are not good at. When we divide up the machine and human components of a task in this way, we fail to take advantage of human strengths and capabilities but instead rely upon areas where we are genetically, biologically unsuited. Yet, when people fail, they are blamed.

- ① difficulties of overcoming human weaknesses to avoid failure
- ② benefits of allowing machines and humans to work together
- ③ issues in allocating difficult tasks to humans in automated systems
- ④ reasons why humans continue to pursue machine automation
- ⑤ influences of human actions on a machine's performance

According to the individualist form of rhetoric about science, still much used for certain purposes, discoveries are made in laboratories. They are the product of inspired patience, of skilled hands and an inquiring but unbiased mind. Moreover, they speak for themselves, or at least they speak too powerfully and too insistently for prejudiced humans to silence them. It would be wrong to suppose that such beliefs are not sincerely held, yet almost nobody thinks they can provide a basis for action in public contexts. Any scientist who announces a so-called discovery at a press conference without first permitting expert reviewers to examine his or her claims is automatically castigated as a publicity seeker. The norms of scientific communication presuppose that nature does not speak unambiguously, and that knowledge isn't knowledge unless it has been authorized by disciplinary specialists. A scientific truth has little standing until it becomes a collective product. What happens in somebody's laboratory is only one stage in its construction.

- ① Path to Scientific Truth: Scientific Community's Approval

- ③ The Lonely Genius Drives Scientific Discoveries
- ④ Scientific Discoveries Speak for Themselves!
- ⑤ Social Prejudice Presents Obstacles to Scientific Research

4. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

People from more individualistic cultural contexts tend to be motivated to maintain self-focused agency or control ①as these serve as the basis of one's self-worth. With this form of agency comes the belief that individual successes ②depending primarily on one's own abilities and actions, and thus, whether by influencing the environment or trying to accept one's circumstances, the use of control ultimately centers on the individual. The independent self may be more ③driven to cope by appealing to a sense of agency or control. However, people from more interdependent cultural contexts tend to be less focused on issues of individual success and agency and more motivated towards group goals and harmony. Research has shown ④that East Asians prefer to receive, but not seek, more social support rather than seek personal control in certain cases. Therefore, people ⑤who hold a more interdependent self-construal may prefer to cope in a way that promotes harmony in relationships.

5. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

Mobilities in transit offer a broad field to be explored by different disciplines in all faculties, in addition to the humanities. In spite of increasing acceleration, for example in travelling through geographical or virtual space, our body becomes more and more a passive non-moving container, which is transported by artefacts or loaded up with inner feelings of being mobile in the so-called information society. Technical mobilities turn human beings into some kind of terminal creatures, who spend most of their time at rest and who need to participate in sports in order to balance their daily disproportion of motion and rest. Have we come closer to Aristotle's image of God as the immobile mover, when elites exercise their power to move money, things and people, while they themselves do not need to move at all? Others, at the bottom of this power, are victims of mobility-structured social exclusion. They cannot decide how and where to move, but are just moved around or locked out or even locked in without either the right to move or the right to stay.

In a technology and information society, human beings, whose bodily movement is less ____ (A) ____, appear to have gained increased mobility and power, and such a mobility-related human condition raises the issue of social ____ (B) ____.
