

2027학년도 수능 대비 모의평가

1. 다음 글의 목적으로 가장 적절한 것은?

Dear Ms. Green, My name is Donna Williams, a science teacher at Rogan High School. I am planning a special workshop for our science teachers. We are interested in learning how to teach online science classes. I have been impressed with your ideas about using internet platforms for science classes. Since you are an expert in online education, I would like to ask you to deliver a special lecture at the workshop scheduled for next month. I am sure the lecture will help our teachers manage successful online science classes, and I hope we can learn from your insights. I am looking forward to hearing from you. Sincerely, Donna Williams

- ① 과학 교육 정책 협의회 참여를 독려하려고
- ② 과학 교사 워크숍의 특강을 부탁하려고
- ③ 과학 교사 채용 계획을 공지하려고
- ④ 과학 교육 프로그램 개발을 요청하려고
- ⑤ 과학 교육 워크숍 일정의 변경을 안내하려고

2. 다음 글의 주제로 가장 적절한 것은? (3점)

Emphasizing speed over frequency can make sense in contexts where everyone is expected to plan around the timetable, including peak-only commute services and very long trips with low demand. In all other contexts, though, it seems to be a common motorist's error. Roads are there all the time, so their speed is the most important fact that distinguishes them. But transit is only there if it's coming soon. If you have a car, you can use a road whenever you want and experience its speed. But transit has to exist when you need it (span), and it needs to be coming soon (frequency). Otherwise, waiting time will wipe out any time savings from a faster service. Unless you're comfortable planning your life around a particular scheduled trip, speed is worthless without frequency, so a transit map that screams about speed and whispers about frequency may simply be planting confusion.

- ① consequences of adjusting frequency of transit
- ② significance of designing an accurate transit map
- ③ importance of valuing frequency in public transportation
- ④ impact of creating high-speed public transportation systems
- ⑤ methods to improve speed and frequency of commute services

The selfie resonates not because it is new, but because it expresses, develops, expands, and intensifies the long history of the self-portrait. The self-portrait showed to others the status of the person depicted. In this sense, what we have come to call our own "image" — the interface of the way we think we look and the way others see us — is the first and fundamental object of global visual culture. The selfie depicts the drama of our own daily performance of ourselves in tension with our inner emotions that may or may not be expressed as we wish. At each stage of the self-portrait's expansion, more and more people have been able to depict themselves. Today's young, urban, networked majority has reworked the history of the self-portrait to make the selfie into the first visual signature of the new era.

- ① Are Selfies Just a Temporary Trend in Art History?
- ② Fantasy or Reality: Your Selfie Is Not the Real You
- ③ The Selfie: A Symbol of Self-oriented Global Culture
- ④ The End of Self-portraits: How Selfies Are Taking Over
- ⑤ Selfies, the Latest Innovation in Representing Ourselves

Like whole individuals, cells have a life span. During their life cycle (cell cycle), cell size, shape, and metabolic activities can change dramatically. A cell is "born" as a twin when its mother cell divides, ①producing two daughter cells. Each daughter cell is smaller than the mother cell, and except for unusual cases, each grows until it becomes as large as the mother cell ②was. During this time, the cell absorbs water, sugars, amino acids, and other nutrients and assembles them into new, living protoplasm. After the cell has grown to the proper size, its metabolism shifts as it either prepares to divide or matures and ③differentiates into a specialized cell. Both growth and development require a complex and dynamic set of interactions involving all cell parts. ④What cell metabolism and structure should be complex would not be surprising, but actually, they are rather simple and logical. Even the most complex cell has only a small number of parts, each ⑤responsible for a distinct, well-defined aspect of cell life.

The computer has, to a considerable extent, solved the problem of acquiring, preserving, and retrieving information. Data can be stored in effectively unlimited quantities and in manageable form. The computer makes available a range of data unattainable in the age of books. It packages it effectively; style is no longer needed to make it accessible, nor is memorization. In dealing with a single decision separated from its context, the computer supplies tools unimaginable even a decade ago. But it also diminishes perspective. Because information is so accessible and communication instantaneous, there is a diminution of focus on its significance, or even on the definition of what is significant. This dynamic may encourage policymakers to wait for an issue to arise rather than anticipate it, and to regard moments of decision as a series of isolated events rather than part of a historical continuum. When this happens, manipulation of information replaces reflection as the principal policy tool.

*retrieve: (정보를) 추출하다 **diminution: 감소

Although the computer is clearly (A) at handling information in a decontextualized way, it interferes with our making (B) judgments related to the broader context, as can be seen in policymaking processes.

- | (A) | (B) | (A) | (B) |
|---------------|---------------------|--------------|--------------|
| ① competent | comprehensive | ② dominant | biased |
| ③ imperfect | informed | ④ impressive | legal |
| ⑤ inefficient | timely | | |
