

2027학년도 수능 대비 모의평가

1. 다음 글의 목적으로 가장 적절한 것은? (3점)

Dear Parents, My name is Danielle Hamilton, and I am the principal of Techville High School. As you may know, there is major road construction scheduled to take place in front of our school next month. This raises safety concerns. Therefore, we are asking for parent volunteers to help with directing traffic. The volunteer hours are from 8:00 to 8:30 a.m. and from 4:30 to 5:00 p.m. on school days. If you are willing to take part in the traffic safety volunteer group, please email us with your preferred schedule at info@techville.edu. Your participation will be helpful in building a safer school environment for our students. Thank you in advance for your contributions. Sincerely, Danielle Hamilton

- ① 교통안전 봉사 참여를 요청하려고
- ② 자원봉사 교육 일정을 공지하려고
- ③ 학교 시설 공사에 대한 양해를 구하려고
- ④ 학교 앞 도로 공사의 필요성을 설명하려고
- ⑤ 등·하교 차량 안전 수칙 준수를 당부하려고

2. 다음 글의 주제로 가장 적절한 것은?

The term "biological control" has been used, at times, in a broad context to cover a full spectrum of biological organisms and biologically based products. This has been spectacularly successful in many instances, with a number of pest problems permanently resolved by importation and successful establishment of natural enemies. These importation successes have been limited largely to certain types of ecosystems and/or pest situations such as introduced pests in perennial ecosystems. On the other hand, this approach has met with limited success for major pests of row crops or other ephemeral systems. In these situations, the problem is often not the lack of effective natural enemies but management practices and a lack of concerted research on factors that determine the success or failure of importation attempts in the specific agro-ecosystem setting. Thus, importation programs, to date, are largely a matter of trial and error based on experience of the individual specialists involved.

- ① difficulties in identifying major pests in agriculture
- ② benefits of introducing natural enemies into ecosystems
- ③ ways to apply biological control strategies to agriculture
- ④ side effects from pest elimination through biological control
- ⑤ reasons for partial success of importation in biological control

The approach, joint cognitive systems, treats a robot as part of a human-machine team where the intelligence is synergistic, arising from the contributions of each agent. The team consists of at least one robot and one human and is often called a mixed team because it is a mixture of human and robot agents. Self-driving cars, where a person turns on and off the driving, is an example of a joint cognitive system. Entertainment robots are examples of mixed teams as are robots for telecommuting. The design process concentrates on how the agents will cooperate and coordinate with each other to accomplish the team goals. Rather than treating robots as peer agents with their own completely independent agenda, joint cognitive systems approaches treat robots as helpers such as service animals or sheep dogs. In joint cognitive system designs, artificial intelligence is used along with human-robot interaction principles to create robots that can be intelligent enough to be good team members.

Honey can be eaten by itself or mixed with other ingredients. Natural or pure honey has had no additives, preservatives or synthetic ingredients added. Also ①referred to as 'undiluted', it is usually more expensive than diluted honeys. Natural honey can also be called 'blended honey', ②which honeys from various sources are blended together not by the bees, but by human processors and distributors in stages after the honey has been collected. Blending is frequently done for taste as well as marketing reasons, especially since some consumers find the darker honeys too ③strong. Mixing different types of honey together can make it more palatable, and also gives a more uniform flavour this is an important consideration for producers and retailers, who ④feel the need to guarantee reliable, unsurprising (typically mild) flavours to their customers. Clover is one of the most popular honeys in the U.S., and ⑤its mild flavour and taste have become familiar to many Americans.

5. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

When considered in terms of evolutionary success, many of the seemingly irrational choices that people make do not seem so foolish after all. Most animals, including our ancestors and modern-day capuchin monkeys, lived very close to the margin of survival. Paleontologists who study early human civilizations have uncovered evidence that our ancestors faced frequent periods of drought and freezing. When you are living on the verge of starvation, a slight downturn in your food reserves makes a lot more difference than a slight upturn. Anthropologists who study people still living in hunter-gatherer societies have discovered that they regularly make choices designed to produce not the best opportunity for obtaining a hyperabundant supply of food but, instead, the least danger of ending up with an insufficient supply. In other words, people everywhere have a strong motivation to avoid falling below the level that will feed themselves and their families. If our ancestors hadn't agonized over losses and instead had taken too many chances in going after the big gains, they'd have been more likely to lose out and never become anyone's ancestor.

*agonize: 고민하다, 고뇌하다

Our ancestors gave priority to ___(A)___ minimum resources rather than pursuing maximum gains, and that was the rational choice for human ___(B)___ from an evolutionary perspective.
