To Whom It May Concern, I recently visited the Lambsford History Foundation's exhibition about the Qukkon Gold Rush. The collection of pictures, tools, and historical documents made the gold miners arriving to Qukkon come to life. This reminded me of when I lived in Qukkon and worked in the mining industry. Because of this, I'm wondering if there are volunteer guide positions available for this exhibition. I can share my experiences working in the extreme cold of Qukkon. Again, I would be thankful if you could tell me about the availability of volunteer positions as a guide. Sincerely, Jonathan Hamilton

It is a strategic and tactical mistake to give an offensive position away to those who will use it to attack, criticize, and blame. Since opponents will undoubtedly attack, criticize, and blame, anyway, the advantages of being proactive, airing one's own "dirty laundry," and "telling on oneself" are too significant to ignore. Chief among these advantages is the ability to control the first messages and how a story is first framed. That leaves others having to respond to you instead of the other way around. This approach is appropriately termed "stealing thunder." When an organization steals thunder, it breaks the news about its own crisis before the crisis is discovered by the media or other interested parties. In experimental research by Arpan and Roskos-Ewoldsen, stealing thunder in a crisis situation, as opposed to allowing the information to be first disclosed by another party, resulted in substantially higher credibility ratings. As significant, the authors found that "credibility ratings associated with stealing thunder directly predicted perceptions of the crisis as less severe."

*dirty laundry: 수치스러운 일, 치부

- ① necessity of being cooperative in a crisis situation
- ② importance of taking the initiative in managing a crisis
- ③ problem of creating false stories to save an organization
- ④ significance of remaining silent in strengthening credibility
- ⑤ advantage of improving the corporate image through media

Once an event is noticed, an onlooker must decide if it is truly an emergency. Emergencies are not always clearly (a) labeled as such; "smoke" pouring into a waiting room may be caused by fire, or it may merely indicate a leak in a steam pipe. Screams in the street may signal an attack or a family quarrel. A man lying in a doorway may be having a coronary or he may simply be sleeping off a drunk. A person trying to interpret a situation often looks at those around him to see how he should react. If everyone else is calm and indifferent, he will tend to remain so; if everyone else is reacting strongly, he is likely to become alert. This tendency is not merely blind conformity; ordinarily we derive much valuable information about new situations from how others around us behave. It's a (b) rare traveler who, in picking a roadside restaurant, chooses to stop at one where no other cars appear in the parking lot. But occasionally the reactions of others provide (c) accurate information. The studied nonchalance of patients in a dentist's waiting room is a poor indication of their inner anxiety. It is considered embarrassing to "lose your cool" in public. In a potentially acute situation, then, everyone present will appear more (d) unconcerned than he is in fact. A crowd can thus force (e) inaction on its members by implying, through its passivity, that an event is not an emergency. Any individual in such a crowd fears that he may appear a fool if he behaves as though it were.

Competitive activities can be more than just performance showcases ①which the best is recognized and the rest are overlooked. The provision of timely, constructive feedback to participants on performance ②is an asset that some competitions and contests offer. In a sense, all competitions give feedback. For many, this is restricted to information about whether the participant is an award- or prizewinner. The provision of that type of feedback can be interpreted as shifting the emphasis to demonstrating superior performance but not ③necessarily excellence. The best competitions promote excellence, not just winning or "beating" others. The emphasis on superiority is what we typically see as ④fostering a detrimental effect of competition. Performance feedback requires that the program go beyond the "win, place, or show" level of feedback. Information about performance can be very helpful, not only to the participant who does not win or place but also to those who ⑤do.

*foster: 조장하다 **detrimental: 유해한

Some environments are more likely to lead to fossilization and subsequent discovery than others. Thus, we cannot assume that more fossil evidence from a particular period or place means that more individuals were present at that time, or in that place. It may just be that the circumstances at one period of time, or at one location, were more favourable for fossilization than they were at other times, or in other places. Likewise, the absence of hominin fossil evidence at a particular time or place does not have the same implication as its presence. As the saying goes, 'absence of evidence is not evidence of absence'. Similar logic suggests that taxa are likely to have arisen before they first appear in the fossil record, and they are likely to have survived beyond the time of their most recent appearance in the fossil record. Thus, the first appearance datum, and the last appearance datum of taxa in the hominin fossil record are likely to be conservative statements about the times of origin and extinction of a taxon.

Since fossilization and fossil discovery are affected by ____ (A) ____ conditions, the fossil evidence of a taxon cannot definitely ____ (B) ____ its population size or the times of its appearance and extinction.
